[linkedin.com/in/deniscouto/](https://linkedin.com/in/deniscouto/) | [about.me/docouto](https://about.me/docouto)

Infrastructure engineer and scripter with almost two decades in the field. Experienced in planning, deploying, support, maintenance, and technical delivery in enterprise environments.

Working on small business to large complex multinational environments using all sorts of solution stacks from Microsoft (On-Prem and Azure), VMware, Citrix, Redhat and others. PowerShell heavy user, able to leverage advanced features of the language.

### Skills & Expertise

- Extensive knowledge of Microsoft Stack (on-prem and Azure).
- Solid knowledge of PowerShell.
- Working knowledge in configuration/automation tools such as Bicep, Ansible and Terraform.
- Working knowledge of Linux administration (CentOS/Ubuntu).
- Good understanding of CI/CD, containers, orchestration tools such as Azure DevOps, Octopus Deploy, Docker and Kubernetes.

### Certifications

**Azure:** DevOps Expert

**Azure:** Administrator Associate

**MCSE:** Cloud Platform and Infrastructure

**CCA-V:** Citrix Certified Associate-Virtualization

**CC-VAD-CC:** Citrix CVAD Service on Citrix Cloud

### Professional Experience

**Citrix Systems, Dublin, Ireland**  
*Senior Escalation Engineer*

**2018 - Present**

Working in the EMEA Escalation team, I provide analysis of complex problems in a 24x7 follow the sun support environment.

In-Depth knowledge of *Citrix DaaS* and Citrix Cloud, leverage debugging techniques to manage high severity cases which can be politically or technically challenging daily.

Day to day goes through SysInternals tools, PowerShell, Splunk, Azure, code review on Sourcegraph and Bitbucket, memory dump analysis with WinDBG, trace analysis with Baregrep, engaging Engineering for further troubleshooting through Jira and Slack.

I delivered some training sessions to Frontline engineers on how to leverage PowerShell console during troubleshooting sessions with customers to act quickly and effectively while assessing the customer issue.

**Ergo Group, Dublin, Ireland**  
*Level 3 Support Engineer*

**2015 - 2018**

Working on escalation and on BAU tasks for several customers (Aercap, CIE, Goshawk, AerLingus, Dunbia and many others) managing a variety of products and services, such as: Windows Server (2008 to 2016), Linux (Ubuntu, CentOS), Azure, Office 365, Hyper-V, VMware ESXi, Netscaler, Xenapp, MS RDS, Exchange, System Center and others.

Also worked on a dedicated team for a single customer where beyond the daily operational tasks I had the opportunity to automate a series of tasks through PowerShell using functions and modules that helped to:

- Finding details of servers combining data from AD, Solarwinds and VMware.

- Finding and gather details of SQL Server databases and SQL Server instances.
- Syncing employee's photos in Active Directory for later use in Skype and other platforms.
- Wrapping APIs to better integration between LOB applications.
- Backing up, encrypting SQL Databases and securely sharing with 3<sup>rd</sup> party vendor.

For this same customer I was responsible for their continuous deploy environment based on *Octopus Deploy*, orchestrating with a 3<sup>rd</sup> party vendor the deployment of their main application throughout Test/UAT/PROD environments and making sure those environments were in sync regarding their data.

I was also engaged on the planning phase to bring their custom intranet web site to Gitlab and enable their 3<sup>rd</sup> party vendor to be able to commit code and get it pushed to the appropriate environments, instead of doing screen sharing to deploy updates.
